SURVEILL VMS

QUANERGY
See beyond.

Elevating Security for Mission-Critical Environments Together.

OUR PARTNERSHIP

Edge360's enhanced collaboration with Quanergy ensures the provision of crucial security and business intelligence services. With the integration of Quanergy's Q-Track and its advanced Object Stitching Mechanism, Edge360 bolsters the capabilities of its flagship Surveill VMS platform, allowing security experts to maintain continuous surveillance over potential bad actors regardless of visual obstructions or low-light conditions.

Quanergy's integration of high-precision LiDAR sensors and a potent AI engine into Surveill VMS revolutionizes real-time tracking of people and vehicles. The inherent flexibility of the Surveill platform allows for a seamless fusion with Quanergy's system, enabling an elevated level of video data analysis for mission-critical tasks.

WHY SURVEILL VMS?

Edge360's Surveill VMS delivers unparalleled reliability, continuous uptime, and fortified data protection by harnessing the power of containerization technology within its operating system. Engineered for the most demanding video surveillance tasks, Surveill presents an IT-centric platform that effortlessly expands to address the multifaceted safety and operational requirements of the contemporary landscape. Prioritizing performance, scalability, and robustness, Surveill VMS transcends the ordinary, offering a holistic approach to refine and elevate the efficacy of security operations.

CONTACT US

ENHANCED VISUALIZATION

The use of 3D LiDAR technology empowers security leaders to collect and process invaluable data from video surveillance footage. When integrated with the Surveill VMS, this system augments the toolkit of security directors, providing them with a more nuanced and comprehensive understanding of their security landscape. This enriched situational awareness empowers organizations to quickly identify and respond to potential threats, optimize operational efficiency.

CENTRALIZED MANAGEMENT

The Surveill and Quanergy integration unifies the two systems allowing users to efficiently manage both from a single interface. It correlates video with events, streamlining investigations and enhancing security. Eliminating separate systems and manual coordination saves time and improves security operations.

STRONGER SECURITY

This integration merges the capabilities of both systems into a unified interface, providing users with the convenience of managing surveillance and event data seamlessly. By linking video insights directly with incidents this integration not only simplifies investigative workflows but also fortifies overall security measures. The removal of isolated systems and the need for manual oversight represents a time-saving transformation, optimizing security operations to a new level of effectiveness.
